manage energy better

G3-PLC Implementation & Benefits

Dave Tarr
Product Manager
Landis+Gyr
South Africa

Proven and robust powerline communicat

Objectives

- To support the G3-PLC Alliance in promoting G3-PLC for the African market
- G3-PLC is an open international standard for power-line communications for smart metering
- Three key points are highlighted on the G3-PLC Alliance website:
 - Cost effective
 - Robust
 - Interoperable

Cost effective

Minimizes infrastructure and maintenance costs by communicating over the existing powerlines.

Robust

Designed for harsh network conditions; G3-PLC robust mode enables communication under noisy conditions.

Interoperable

International standard with strong certification program guarantees interoperable solutions

G3-PLC Technology: Highlights

- **Cost effective:** Minimizes infrastructure and maintenance costs by communicating over the existing powerlines
- **Robust:** Designed for harsh network conditions; G3-PLC robust mode enables communication under noisy conditions
- **Interoperable:** International standard with strong certification program guarantees interoperable solutions
- **Proven:** Over 80 million G3-PLC products in operation in more than 30 countries worldwide

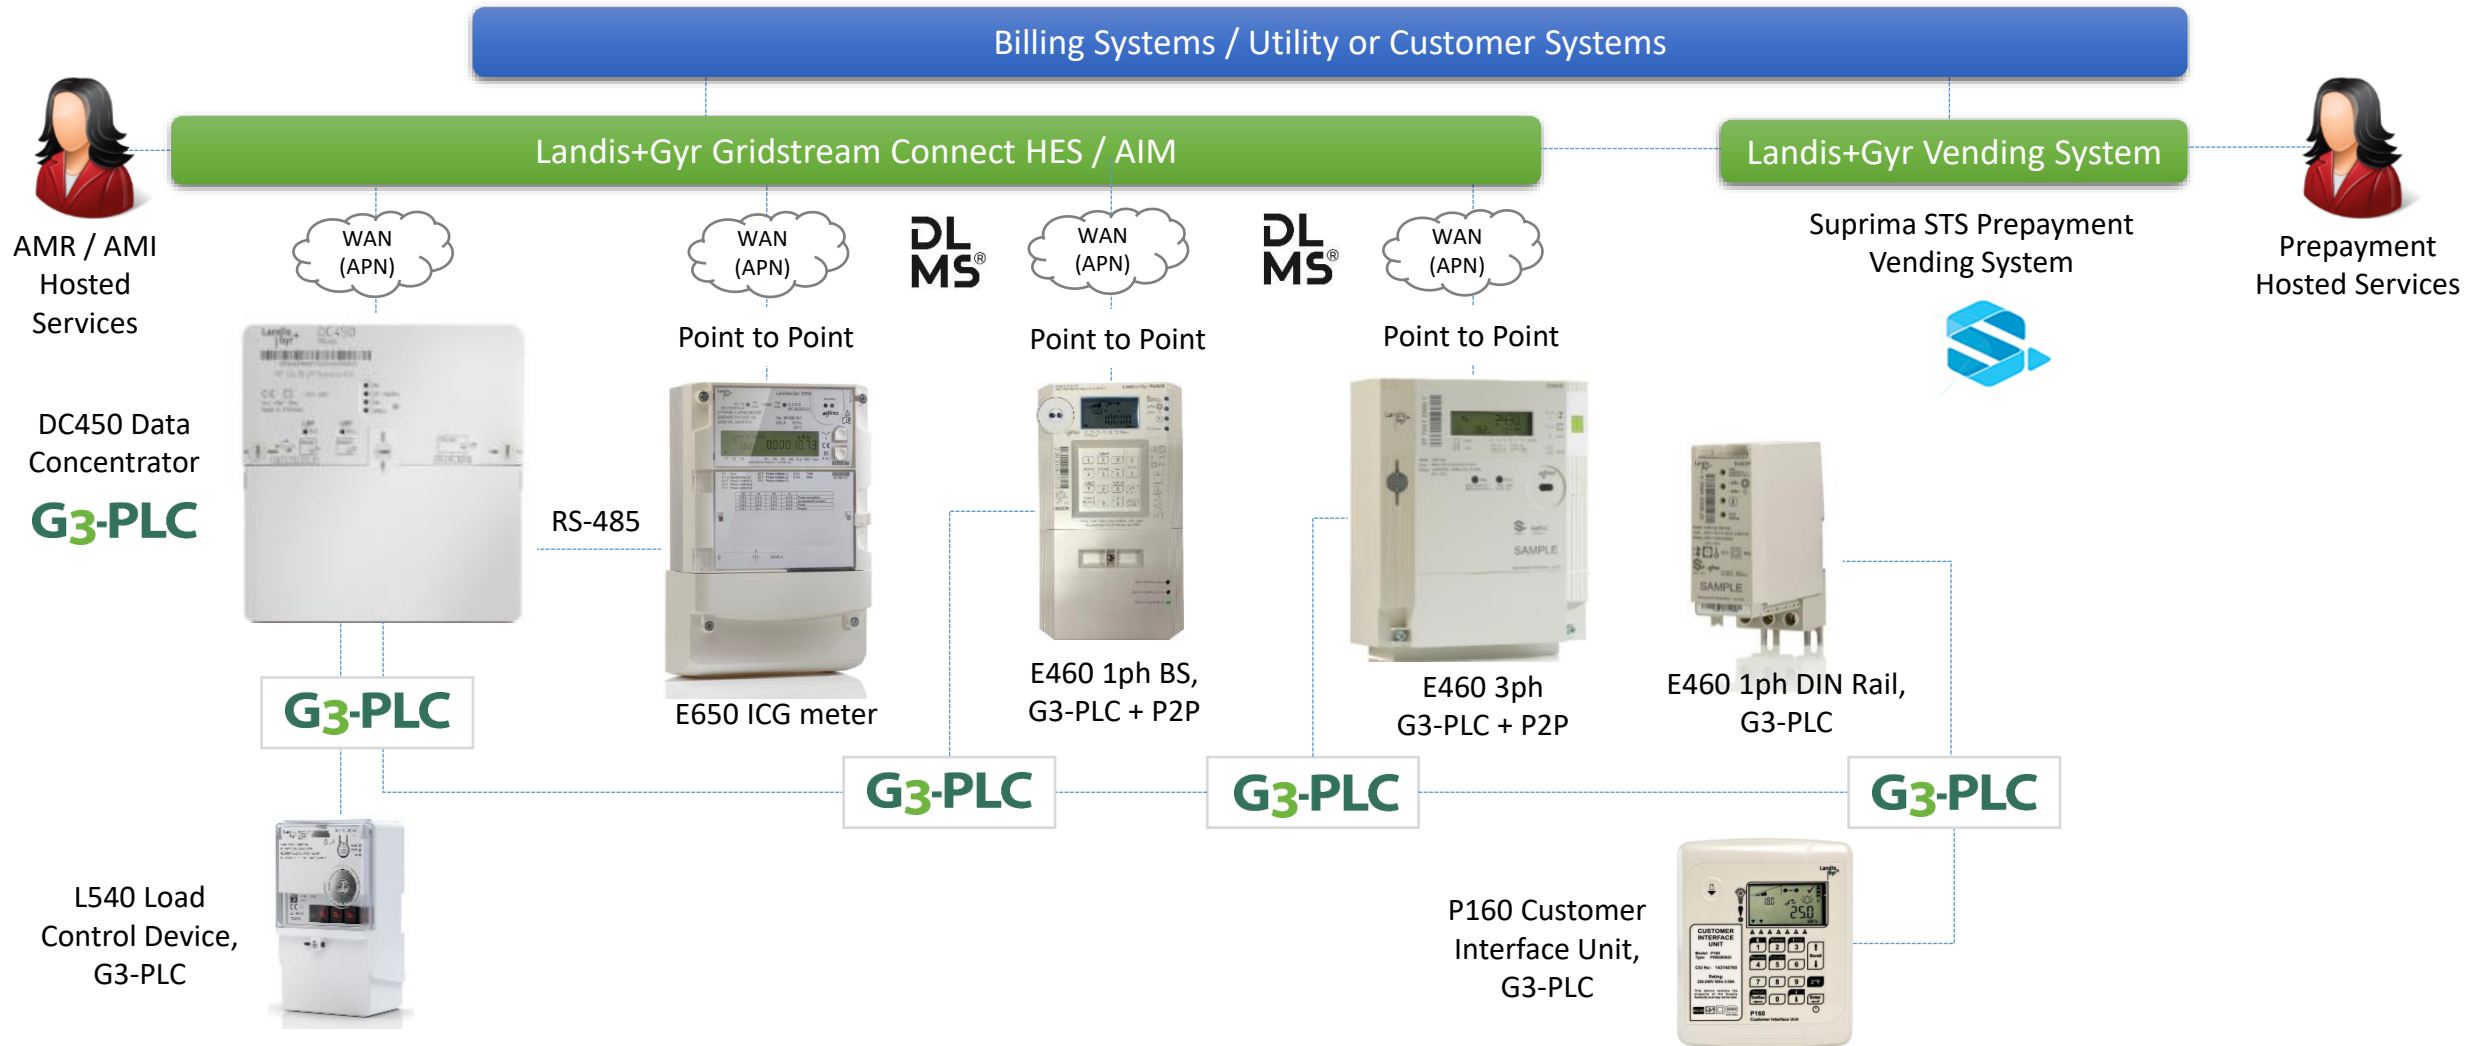

Main Objectives of the G3-PLC Alliance

- Maintain and enhance the G3-PLC standard
- Operate international certification program to enable interoperability amongst different manufacturers
- Promote the value, benefits and applications of G3-PLC technology globally

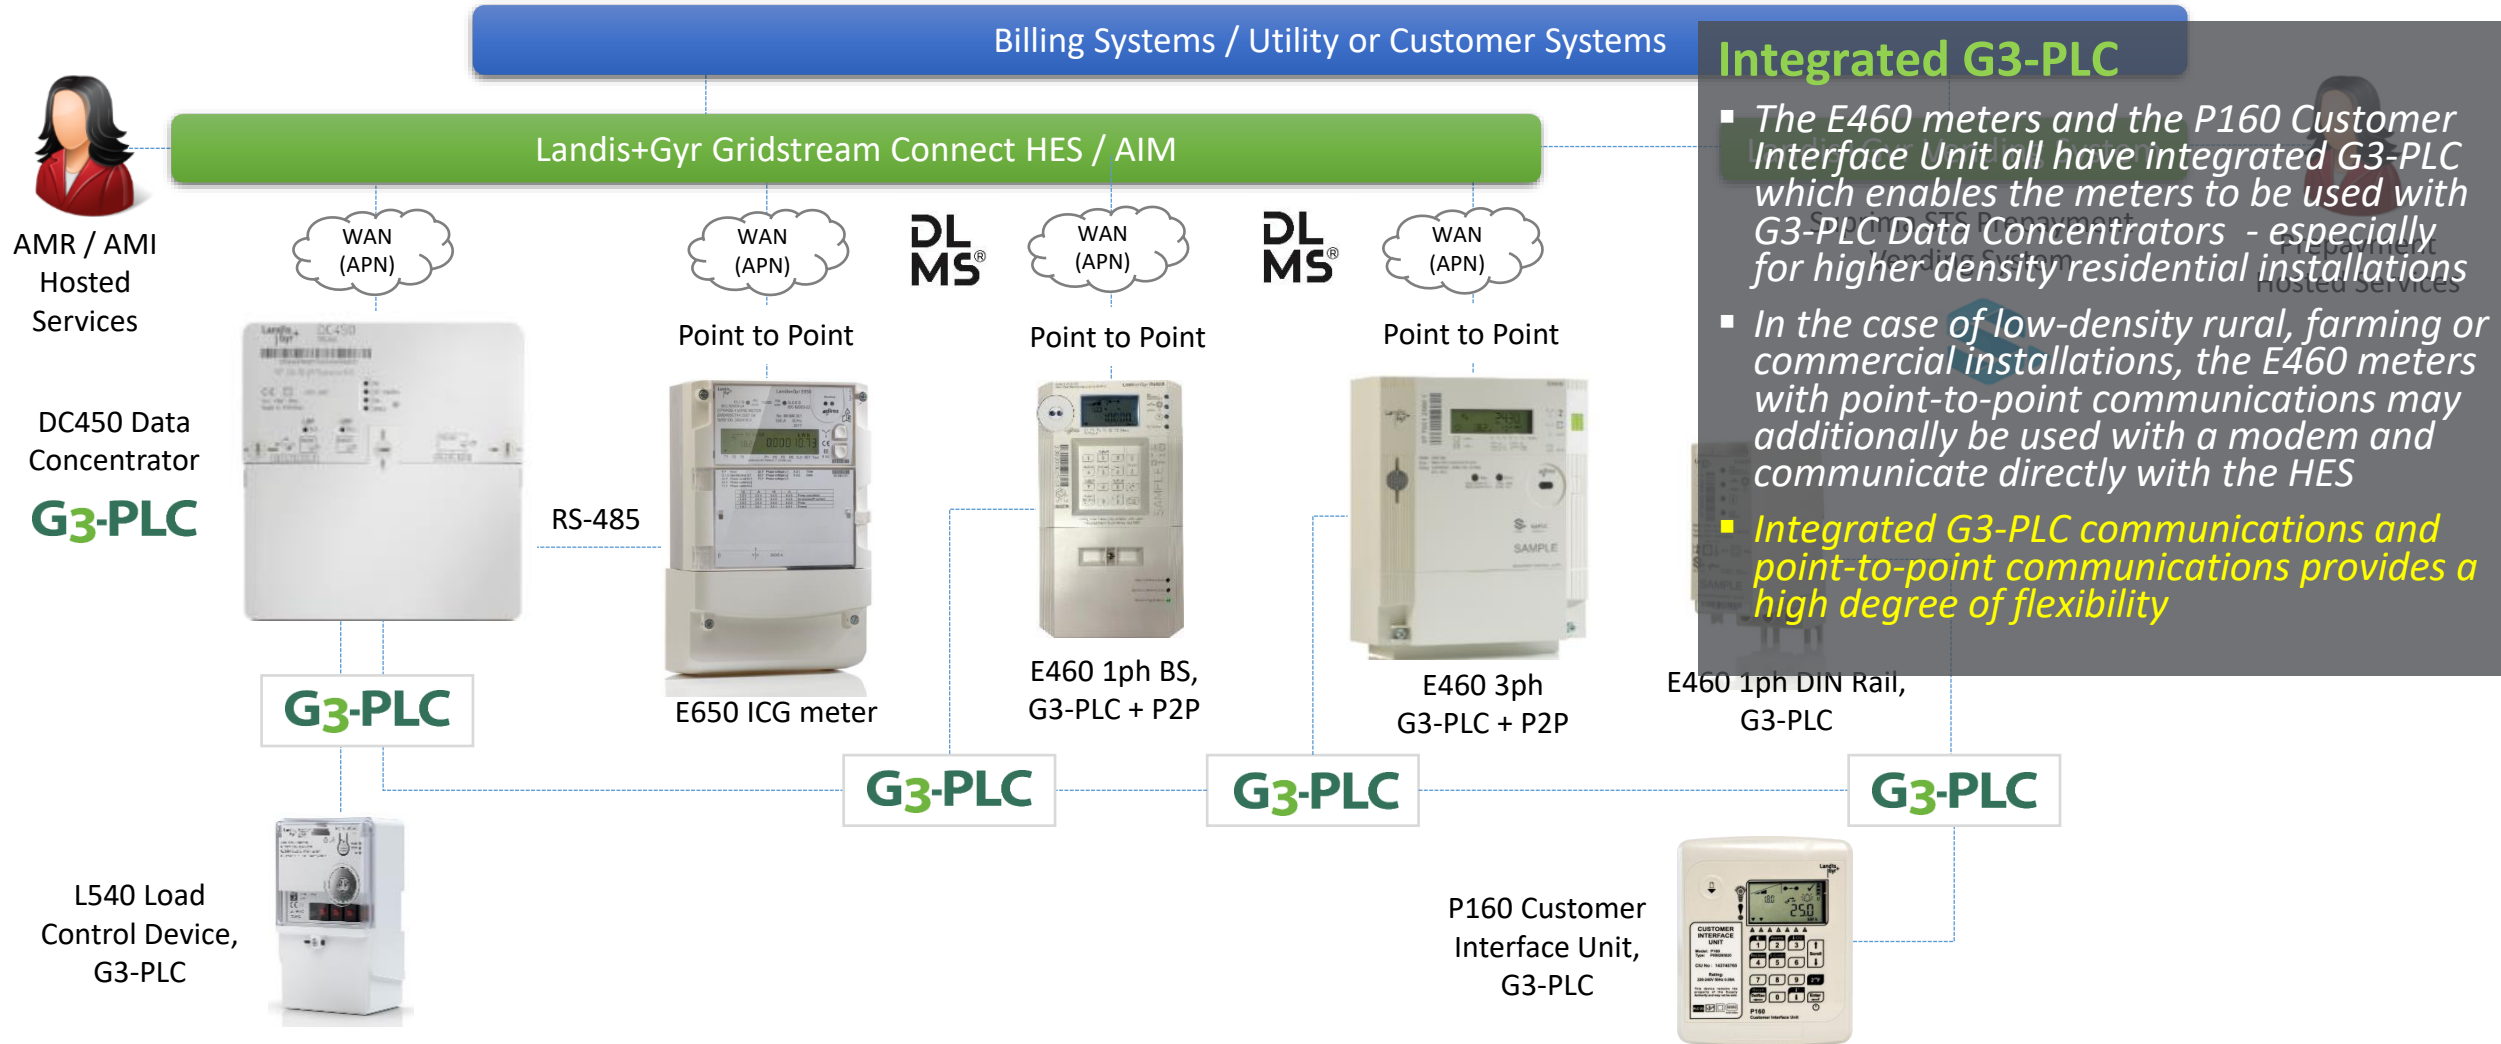

Growth in the use of technology and the G3-PLC certified devices gives peace of mind to manufacturers and utilities

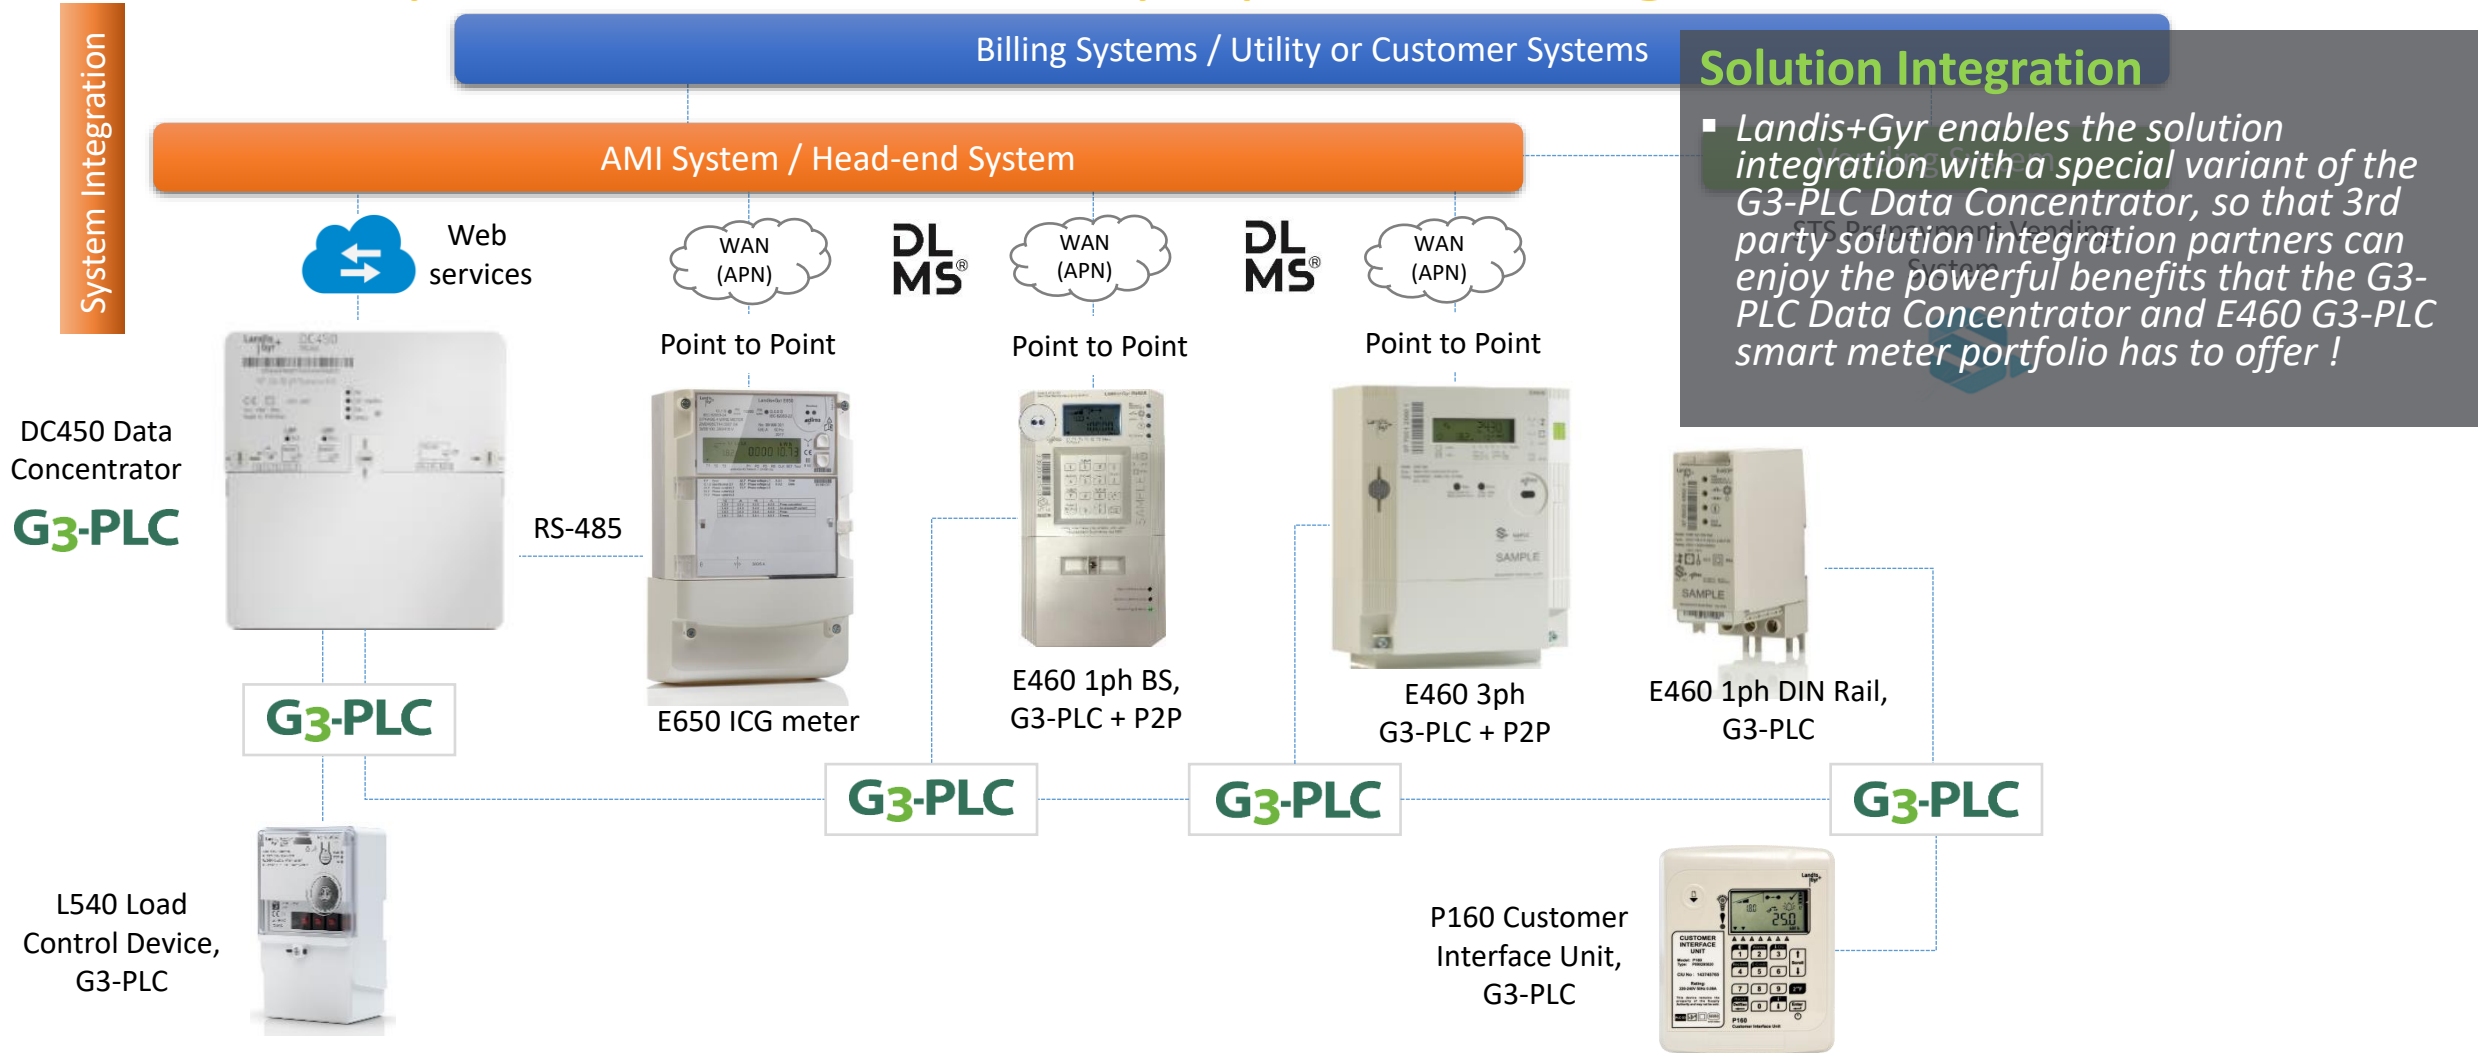

Landis+Gyr Solution Architecture using G3-PLC Technology

Landis+Gyr Solution Architecture using G3-PLC Technology

Landis+Gyr Solution: 3rd Party System Integration

Landis+Gyr Solution: G3-PLC Implementation

Off-line

E460 meter forms its own PAN and the P160 CIU connects to meter PAN – this allows off-line architecture in the absence of a G3-PLC Data Concentrator

On-line

E460 meter joins DC PAN and P160 CIU connects to the meter via the DC PAN and this allows on-line architecture in the presence of a G3-PLC Data Concentrator

Data Concentrator Functionality: G3-PLC

Communications Quality

- The G3-PLC communications quality is calculated by the sent and received dlms messages between the Data Concentrator and the device

PLC Utilities

- The Landis+Gyr G3-PLC Data Concentrator provides powerful PLC utilities such as PING to G3-PLC devices for fault finding and network analysis
- PLC utilities also include the ability to construct dlms get, set and action commands to the G3-PLC metering devices

The main customer / utility benefits & value

- **Peace of mind** that the technology is internationally adopted and an open standard for smart meters and smart grids
- **G3-PLC certified** Data Concentrators provide powerful tools and visibility of your metering assets
- G3-PLC provides **robust communications** over existing power-lines, therefore providing cost effective communications in high density residential or commercial environments
- Visibility of topology and communications statistics for fault finding and analysis
