Project Learning & Continuous Improvement

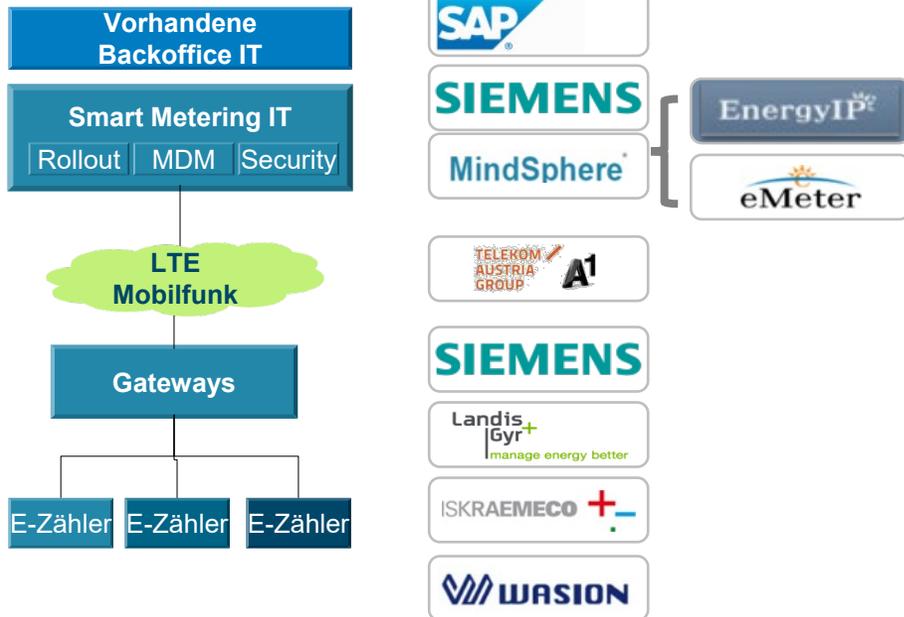

PROJECT TARGET

Deployment of 1.28 million smart meters under an end-to-end high performance AMI solution with multi-integrated technology providers. More than 600,000 G3-PLC smart meters have been delivered by 2022.

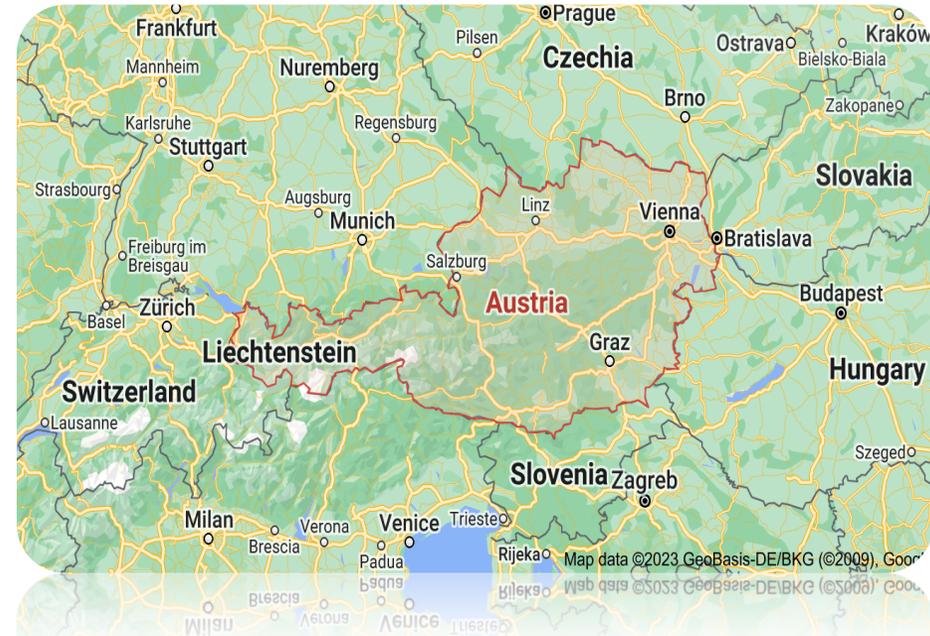

UTILITY

OVERALL PROJECT ARCHITECTURE

REGION

IMPLEMENTATION CHALLENGES

Meters randomly entering in automatic registration mode, and edge meter nodes switching between gateways, causing unstable reading rates.

External interference has been observed in both CENELEC-A and FCC bands. Elevators and water pumps inverters acting as main disruptors. Underground cable routing leading to massive cross-talking issue.

OPTIMIZATION PLAN

- **Optimized network design**

Site survey, reviewed network planning, repositioning of gateways and added repeaters.

- **Optimized PLC network registration process**

- **Meter nodes switching capabilities to adapt and elect the most effective frequency band.**

Head end System ability to assess and switch between frequency bands based on the effectiveness of the historical data reading performance.

99%

Success reading rate in the installed meters base.

Enhanced Asset management capability!

Combines AMI consumption data with distribution grid topology and equipment indexes and sensors to identify overload on distribution transformers.

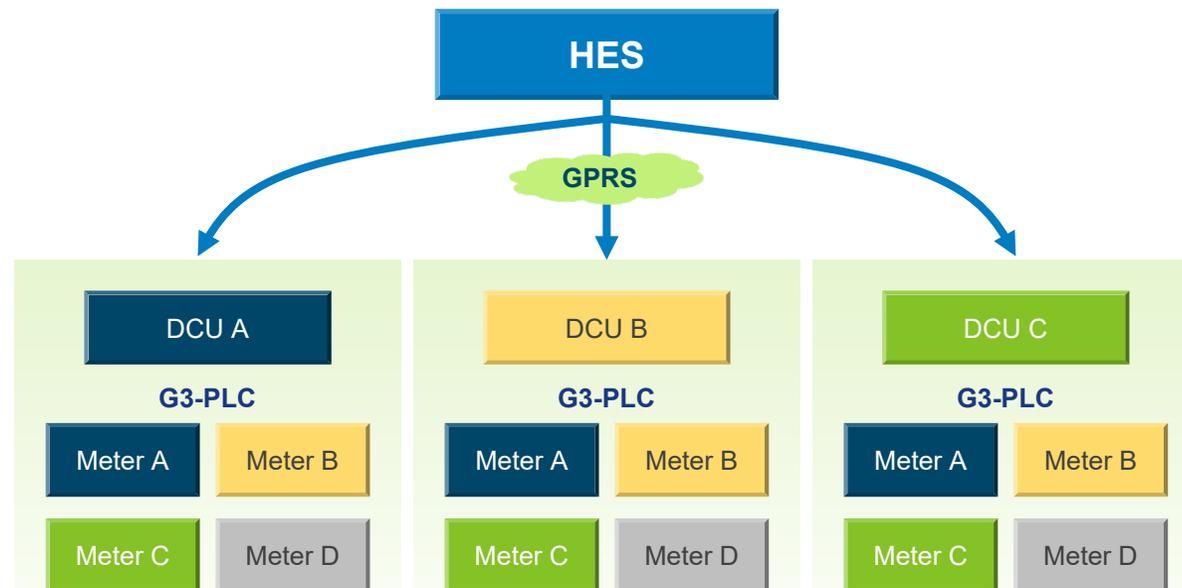

PROJECT TARGET

Interoperable multi metering platform project with smart prepayment capabilities in partnership with the main country utility. Wasion has deployed over 500.000 smart meters in the last 3 years with G3-PLC technology.

UTILITY

OVERALL PROJECT ARCHITECTURE

REGION

IMPLEMENTATION CHALLENGES

A single DCU connected to up to 600+ smart meters, causing the success rate to drop significantly. A load profile data collection success rate observed in the HES (Head end System) was at 73% level, which was under the expected project KPI.

OPTIMIZATION PLAN

- **G3-PLC Concurrent Meter Reading solution has been implemented.**

The DCU/CCO module now supports **4 simultaneous readings** by default and an expansion update will be released shortly.

- **To adopt G3-PLC fast network access solution.**

OUTCOME

98%

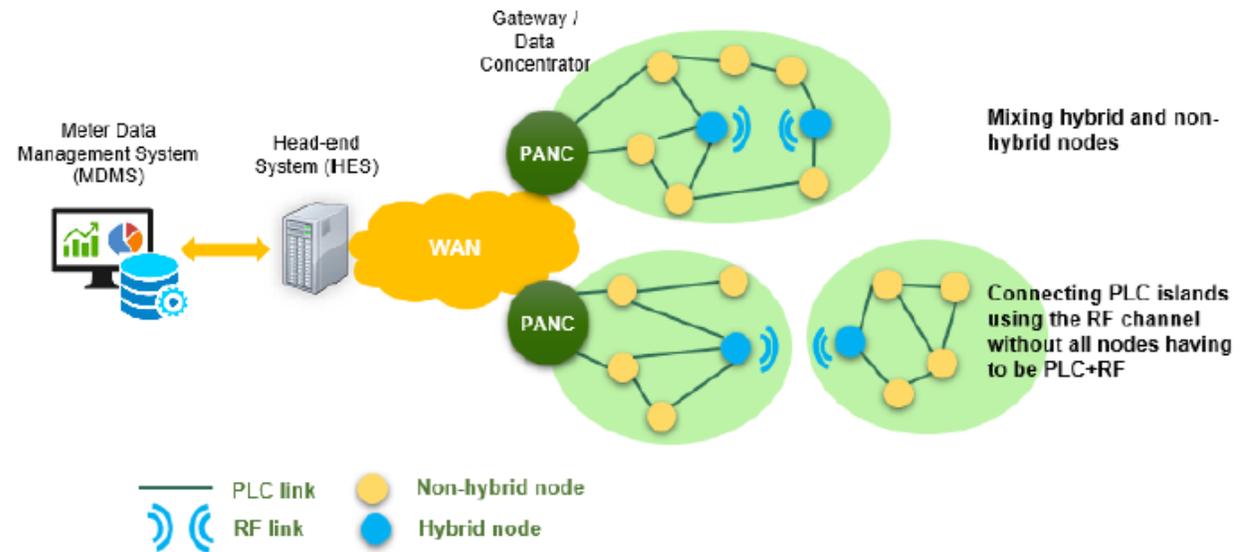

Data collection success rate after the optimization plan.

Technology Evolution

Hybrid G3 PLC + RF Technology to tackle challenging environment, during project implementation, ensuring the best communication performance.

G3-Hybrid

01

Overcoming high-rises with thick walls, underground installations, high electrical noise environment.

02

Improving reading performance, network reformation, and system availability.

03

Reducing the complexity and cost of network installations.

Performance Enhancements

Optimization of networking processes, frequent network switching and network congestion issues based on different field application scenarios.

Optimizing the reading success rate of DCU minutes level load profile data in large-capacity stations

Certification, Interoperability

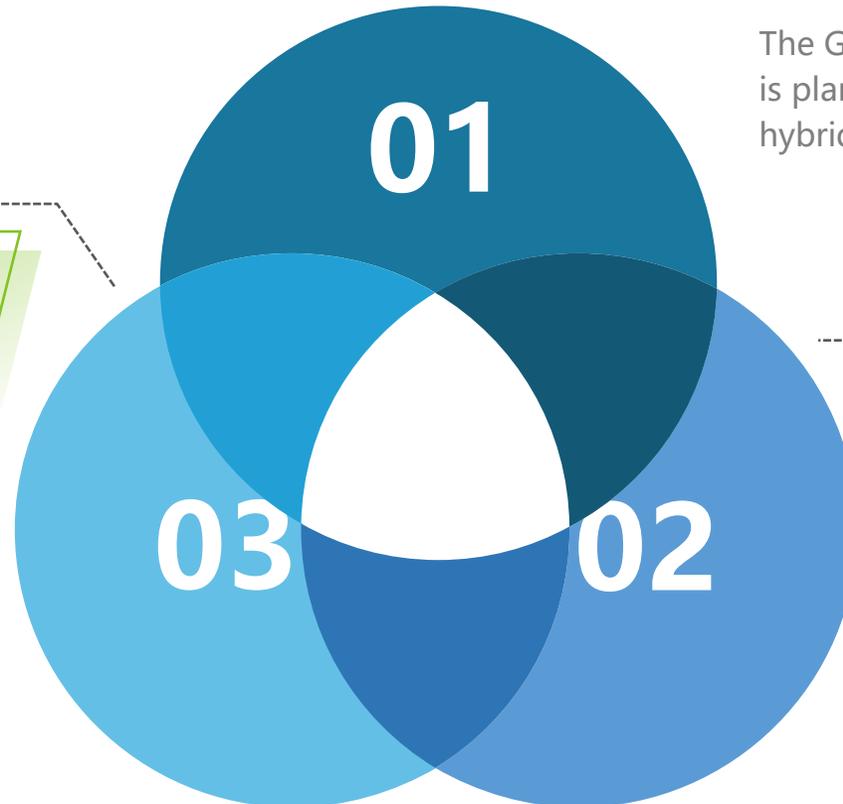

The G3 Hybrid product has been developed, and is planning to implement the G3 PLC/RF hybrid certification process.

Network planning Toolkits

Establish network planning and optimization toolkits to assist in batch deployment, identify potential problems and optimize network design.

A background image showing two hands reaching upwards towards a bright sun in a vast green field under a clear sky. The sun is positioned on the left side, creating a lens flare effect. The hands are positioned on the left side of the frame, with the right hand reaching higher than the left. The field is a vibrant green, and the sky is a pale, clear blue.

Our Vision:

In the future, each city, each community, each enterprise and each household will enjoy the lasting benefits from utilizing Wasion's products, technology and services.
